

# Boost the capacity of your team with BES IT Staff Augmentation.

Over the last few years we have seen an increased need from our clients for technical resources onsite. They have IT projects of varying sizes, but without the staff or experience to see it to completion. This is where BES IT Staff Augmentation fits in.

BES IT Systems have an incredibly experienced team of technicians, with the capability and knowledge to plug into your in-house IT department on a fit-to-need basis.

You can contract a technician with elevated qualifications for a project duration, without the HR overheads needed when on-boarding staff internally.

There are a few reasons behind the increasing demand for onsite technical resources rather than businesses hiring technicians themselves:

## FLEXIBILITY OF RESOURCES

Avoid the cost-load of hiring a new employee. If you need a resource for a short period of time, it can be easier, and faster, to contract a technician through BES IT Systems rather than going through the whole recruitment process.

## TRIAL BASIS

If you are looking to expand an existing team, you are able to test how the team would look and function before committing to an extra person.

## YOUR CURRENT TEAM NEEDS UPSKILLING

Your current project may need a specific skill set, not held by your existing staff. You can contract a team member with the required experience and skills meet your project needs.

## RESOURCE BACKUP

Access to contract based team members can take the pressure off your business to find a replacement if your team is short a member.

DID YOU KNOW:

IT Staff Augmentation can give your existing team better focus on bigger picture projects!
